Dear All,

On April 19, 1995, I was spared by a hiccup with a dot matrix printer. Sharing with you a moment in OFMA history. During this period trying to change the state floodplain act we worked closely with the Oklahoma Municipal League (OML). OFMA had just had their annual conference. Diane Pedicord was the OML General Council and was a presenter at the conference. OML was on board about requiring annual training.

The thank you letter I was preparing got stuck in the printer. The printer was next to our secretary’s desk at the front of the office. My desk and computer were adjacent to the north window. I got up from my desk and headed towards the printer. I was maybe four feet south of the windows when all heck occurred. All of our windows in the building imploded. Glass hit me in the lower back and legs.

Later I learned several lacerations required stitches. I was lucky not being right by the windows. On the first anniversary of the bombing Diane sent me flowers in remembrance of the bombing.

Trudy Rigney was one of our employees who lost their life that day. She had just left my cubicle after leaving a poem she wrote for our newsletter. The poem addressed how parks are suited for the floodplain not homes. Each year OWRB honors Trudy and Robert Chipman by trees planted by the office on Classen Blvd.

After the bombing the ASFPM conference was in Portland, Maine. At the opening plenary session the chairman read Trudy’s poem to all conference participants.

I will always remember April 19!

Blessings and prayers to you all. Live today as best you can. You just never know what the future holds.

Sincerely,

Ken

Letter from the Chair

Carrie Evenson PhD, PE, CFM | Chair |
Assistant Public Works Director City of Midwest City

A message from OFMA's new Chair

Carrie Evenson is a registered Professional Engineer in the States of Oklahoma and Colorado and received her Bachelors and Doctoral degrees in Environmental Science from the University of Oklahoma. She began her career with the Oklahoma Department of Environmental Quality (ODEQ) in the Industrial Wastewater and Stormwater Enforcement section where she worked for over 11 years. She then joined the City of Norman where she worked as the Stormwater Program Manager for 5 years. She currently serves as the Assistant Public Works Director for the City of Midwest City.

She has been a Certified Floodplain Manager since 2017 and previously served as the Stormwater Quality Committee Chair and Vice Chair for OFMA. She is also a Certified Stormwater Manager, a Certified Professional in Stormwater Quality, a Certified Pesticide Applicator, and holds A Wastewater Operator, A Wastewater Lab Operator, and A Water Operator licenses from ODEQ.

One of the hardest things in life is change. No one likes it, but we all know it happens. Sometimes, it's the best thing that could happen. Others, not so much.

OFMA and the people that make it such a great organization have seen a lot of change since it was founded. In fact, you'll read a story about dramatic and sad changes that Ken Morris faced at the Oklahoma Water Resource Board as a result of the Murrah Building Bombing on April 19, 1995, earlier in the BFE. While I was still in high school when that tragic day occurred, I still remember exactly where I was when I heard the news. That's the type of change that brings profound sadness and I hope no one ever has to face again. Change can also bring profound joy, like when you hold your newborn child in your arms for the first time, or marry the love of your life.

So why am I talking about change? Organizations, like people, experience change: of leadership when new officers are elected; change in membership when people move, change jobs, or retire. While those can be both happy and sad occasions, the organization needs to be able to adjust to these changes in order to grow and continue to provide its people with the best possible professional home.

New CFMs are experiencing this change. Those of us that passed the CFM exam a few, or more, years ago, remember sitting in a classroom-like setting with paper maps and paper tests. New CFMs can take a proctored exam at home on a laptop. Is that a bad change? It probably depends on your age and perspective. For me, I viewed it as being a bit inevitable. We were always going to have to change with technology.

OFMA's discussion on stormwater management versus floodplain management versus stormwater quality is a bit like this for me. Nationally, the trend has been to include anything related to runoff as stormwater management. Open a trade journal from the Water Environment Federation, and you will see articles on flooding and flood mitigation under the heading of "Stormwater". For me, it's always been one water, and it makes a lot of sense to continue OFMA's growth as an organization to include all of the components that stormwater management encompasses, which includes floodplain management, overland flow (thank you, Ron Flanagan!), and stormwater quality.

I hope we can embrace change and accept the potential challenges and growth that comes with it while still honoring OFMA's history and traditions. Have a great spring, everyone!

FEMA Region 6 Features Resilience and Equity Initiatives at 2023 Mitigation Workshop

2023 FEMA Region 6 Mitigation Virtual Workshop

BRINGING RESILIENCE AND EQUITY TOGETHER THROUGH MITIGATION PLANNING

In October, Region 6's Mitigation Division hosted its annual Mitigation Workshop. This year's theme was "Bringing Resilience and Equity Together through Mitigation Planning." It brought together local, state, tribal and other representatives to hear about mitigation best practices. The event focused on topics like equity, new resources and policy updates.

Presenters aligned with the new equity requirements in the 2022 mitigation planning policies by highlighting projects that work to increase equity. The Southern Climate Impacts Planning Program talked about their "Low-Capacity Communities Project." FEMA Region 6 discussed their new "Base Level Engineering and Mitigation Planning Training Initiative." These presentations showed how building capacity can help reduce barriers to mitigation planning.

The Southern Plains Tribal Health Board spoke on how mitigation planning is key to identifying and addressing risk. Attendees learned about the board's tribal public health and hazard mitigation work in the region. To connect planning to action, FEMA's Hazard Mitigation Assistance (HMA) presented on how they are increasing equity in funding through the Justice40 Initiative. Justice40 requires that 40 percent of the overall benefits of investments flow to disadvantaged communities. HMA co-presented with the People Organized in Defense of Earth and Her Resources. They showed how their work in Texas mitigates the disproportionate impacts of natural hazards.

Presenters also discussed FEMA's new metrics for identifying and reducing flood risk. As FEMA rolls out the Federal Flood Risk Management Standard, flood mitigation projects must meet stricter standards to receive HMA funding. Region 6's work on Multiple Loss Properties will cast a wider net when looking at flood risk data. FEMA will use this data to check against funding eligibility, so a wider net will lead to more eligible properties.

The workshop hosted over 250 people from all levels of emergency management. Those who attended deemed it a success. Attendees reported that they "learned something from each of the sessions," and "feel that these sessions contained a lot of amazing information and [they] look forward to the next one." Region 6 Mitigation will work to exceed these outcomes during next year's workshop.

Obtaining Required CECs and Oklahoma State Credits

Joe Remondini PE, CFM | Chairman OFMA Professional Development Certification Committee

The new schedule for the Special Topics/Advanced classes have been set. The schedule includes the OWRB 101 classes at the same locations. A variety of Special Topics will be presented to include Hazard Mitigation Programs and funding opportunities. Also other flood mitigation solutions to include “Green Building” and Low Impact Development and others will be presented. Attached is the schedule of classes as developed by the Oklahoma Water Resources Board.

If you aren't yet and want to become a Certified Floodplain Manager (CFM), the applications and requirements are shown on our website. The CFM Exam is now only available as a digital exam. OFMA, as an accredited Chapter of ASFPM, is responsible for reviewing and approving applications. The digital exam is administered through a private company called “Meazure” therefore your testing fees are split between them and OFMA.

I encourage OFMA members and CFMs to attend these classes to ensure you receive adequate CECs for the year. The required CECs is 16 in a 2 year period with a minimum of 4 per year and maximum counted is 12 annually. Please watch the [OWRB](http://www.okflood.org) and OFMA (www.okflood.org) websites to see scheduled classes and potential changes.

Michael Kimbro PE, CFM
Region 1 Representative
Oklahoma Department of Transportation

Ken Morris
Honorary Board Member
OWRB Retired

OFMA History

On March 14, 2024, the OFMA Board voted to establish a committee to develop the history of OFMA. Michael Kimbro was designated chair, with Ken Morris, Carolyn Schultz, Harold Springer, and Joe Remondini assisting with the development of the OFMA History and recognizing early association founders and members. As time goes by, many current OFMA leaders may not know who provided the mortar and bricks that laid a strong foundation for our Association. Many of the OFMA awards are named after several of these early leaders. For instance, Don Ellison, Ben Frizzell, Kenneth Morris, Ronald Flanagan, and Gavin Brady have awards in their name. Many other early leaders gave their time and energy to help develop an association to educate floodplain managers.

The idea for this historical development originated from the Association of State Floodplain Managers (ASFPM). Past Executive Director Larry Larson and others developed a Wall of Honor for many of its early founders. Their wall can be viewed on their website (<https://www.floods.org/about/asfpm-history/association-milestones/>). Each individual honored contains a photo and a short paragraph of their contributions to the Association.

If you have any stories or items that you believe should be included in OFMA's history, send them to Michael Kimbro at (michael.kimbro@odot.ok.org). For the subject line of the email, please use “OFMA History.” If you have any questions that need to be addressed by phone, please contact Michael Kimbro at 405-522-0612. This information will help to build an OFMA Wall of Honor on our website. Please try and complete this request over the next three months.

ASFPM Releases Strategic Planning Guide for State Floodplain Management Programs

Originally published in AFSPM Newsletter

Whether you're a fan of the Alice in Wonderland quote: "If you don't know where you're going, any road will take you there;" or, Yogi Berra is more your thing: "If you don't know where you're going, you'll end up someplace else", a strategic plan can serve as an effective road map to help prioritize efforts, provide structure to day-to-day decisions, and advance your broader mission to ensure you get where you want to go.

For state floodplain management programs, strategic planning can put states in the best position to effectively and efficiently manage flood risk and floodplain resources in line with evolving approaches to floodplain management at the federal, state, and local levels. The strategic planning process is driven by the three questions: Where are we now? Where do we want to go? And, how do we get there?

To guide states through the process, ASFPM has published [Strategic Planning Guidance and Methodology for State Floodplain Management Programs](#). An updated and expanded version of the 2010 edition, this resource is intended for those who make policy decisions and set priorities for state floodplain programs. It can help states align their floodplain management programs with community needs and the 10 guiding principles for effective state floodplain management programs as well as FEMA's Tiered State Framework characteristics.

Although the FEMA-funded guide provides a recommended method for strategic planning that incorporates NFIP coordination with overall effective state floodplain management, it can also be used by state programs that are currently not participating in CAP-SSSE and/or for a portion of the state's overall floodplain management effort (i.e., for floodplain management programs that are undertaken by a single state agency). Lastly, the approaches highlighted in the guide can be adapted to fit other strategic planning methods, if your state agency has its own preferred or prescribed model.

State and territorial floodplain management programs vary widely across the nation. Some programs were established by state laws that pre-date the creation of the National Flood Insurance Program (NFIP) and include dozens of staff implementing multiple programs such as state permitting, flood mapping, flood mitigation grant program administration, and NFIP coordination. Others have one or two staff members working under the framework of a Governor's Executive Order for the purpose of acting as the state coordinator of the NFIP.

Regardless of size or structure, if a state participates in the Community Assistance Program – State Support Services Element (CAP-SSSE) or not, all state floodplain management programs could benefit from going through the exercise of strategic planning, as all state programs will evolve over time – and strategic planning can help position states to be prepared for any necessary transition.

Spanning 125 pages, Strategic Planning Guidance and Methodology for State Floodplain Management Programs is organized into 10 parts, one for each of the guiding principles for effective state floodplain management programs, and it walks users through the five phases of strategic planning – review, analysis, visioning, planning, and implementation – along with prompts for working through each phase. The guide also features templates, worksheets, and checklists as well as a real world example of a state's completed plan, thanks to the generosity of the State of Missouri's Emergency Management Agency for its willingness to share its strategic plan for FY 2021-2024.

ASFPM hopes this practical guide can help states align their floodplain management programs with the 10 guiding principles for effective state floodplain management programs and, if applicable, FEMA's NFIP coordination activities for states, such as the Tiered State Framework characteristics. And in the end, create effective state programs that reduce losses and damage from floods, and protect natural floodplain resources.

Risk Communications Guidebook for Local Officials

FEMA Region 6 launched its newly updated Risk Communications Guidebook for Local Officials. This Guidebook is a "how-to" resource to help local officials plan outreach and community engagement throughout the Risk MAP process. It outlines risk communication strategies with links to helpful materials. Local floodplain management officials often have multiple roles and may not have the benefits of a communications staff. FEMA Region 6 made the Guidebook with this in mind. It has nearly 20 customizable templates for press releases, talking points, meeting presentations, outreach toolkits and more.

The Guidebook debuted over 10 years ago, and now has a fresh, new look and updated content. This content reflects current priorities of FEMA and the Risk MAP process, such as equity and future conditions. FEMA Region 6 also updated the content in plain language and improved accessibility. View or share the Guidebook and its resources. It can be found at <https://www.fema.gov/about/organization/region-6>.

For more information, please contact FEMA Region 6 Mapping Communications and Outreach Specialist, Dustin Busse at dustin.busse@fema.dhs.gov.

OFMA DRT Corner

Rev. W. B. "Bill" Smith, PE, CFM | OFMA DRT Coordinator

IT'S NOT TOO LATE, IT'S NOT TOO LATE – shouts Deacon Bill. There is still time, once the snow melts and it warms a little to clean out the ditches and culverts, remove the trees and shrubs, debris, and junk that people throw into our storm drainage and flood channels, culverts, etc.

There is still about 65 days until the normal rainy season begins in Oklahoma – if it will in 2024. But as the Boy Scout Moto says – Be Prepared. So as the days begin to get longer, and sun begins to shine a little more – get your crews out and clean out the conveyance channels and structures. It will be a payoff in the spring when the rains fall, and creeks begin to rise.

Also, Floodplain Administrators (FPA) – one of our primary duties is to educate the citizens of our communities about flood risk. Do you have a Turn Around Don't Drown poster on the wall of the permit center? Do you have brochures that the citizens of your community can read and be better acquainted with flood insurance, types of flood risk, what to do in the event of a flood – before, during and after? Have you prepared and published an article about flooding in your community? Do you know the most critical areas of flooding so that you can work with your Emergency Manager – could be yourself – to evacuate your citizens? There are lots of things we can do as FPAs that doesn't cost a lot of money – takes a little of your time – but you will sleep better at night knowing that you did something to help those who are not as knowledgeable as we are on floodplain and localized street flooding outside the SFHA.

Be Prepared, Be Aware, and Do your Part!

Funding Acknowledgment
